

What your sponsorship did, counted.

Halden Lager × Example festival · Three days · 40,000 guests · camping
App launch 2 June to 21 July 2026 · festival days 17 to 19 July

18,240 people opened the Example festival app this summer, and every one of them saw the Halden Lager logo: **1,613,250 times** in all, in eight places, each counted. Most of those looks came between 21:00 and midnight, when people checked who was on next. **2,412 adults** scanned the code at the bar and said yes to a text from the brand. At Fri 20:52 the app sent one safety alert and held sponsor messages for 40 minutes; that pause is in the numbers. On the Monday after, **42 %** of those asked remembered the brand, up from 24 % before. What we don't claim: bar sales caused by the app.

PEOPLE WHO SAW THE LOGO
18,240
everyone who opened the app

TIMES THEY SAW IT
1.61 m
1,613,250 times, each counted

PEOPLE WHO SAID YES
2,412
to a text from the brand

REMEMBERED THE BRAND
42 %
Monday survey, up from 24 % before

Sources: app analytics, the app's own message log, scans and yes/no records at the bar code, the Monday survey. Whole-crowd counts need gate data from ticketing; the app sees only people with the app, and location only where they switched it on.

02 **At a glance** eight numbers and the weekend hour by hour
03 **Where the brand lived** who saw each place, and how often
04 **The bar zone** who came, when, how long
05 **People who said yes** numbers shared, and how the yes works
06 **Did it move people?** pushes, coupons, the Monday survey
07 **From a real festival** one push, about 1,000 people
08 **The money** who paid, and what each place cost

At a glance

Three days · 40,000 guests · camping. 18,240 people opened the app, 45 % of guests.

Times the logo was seen, by hour, festival days

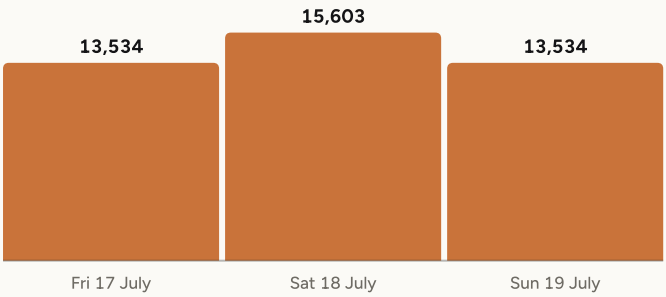

EXAMPLE DATA

Each point is one hour, 12:00 to 03:00. The dashed line marks the storm: one safety alert to every phone with the app; sponsor content paused for 40 minutes, then resumed.

People who opened the app, per festival day

EXAMPLE DATA

Where they installed it

EXAMPLE DATA

49 % Before the festival
51 % On site, from QR codes

On-site installs count too: the code by the bar is also an install point.

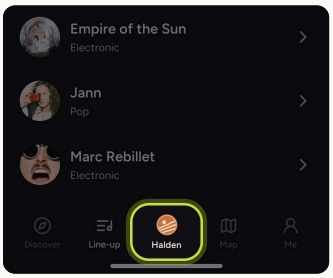

Read this first. Most of the 1,613,250 times are the small logo in the tab bar (1,440,000), seen again and again by the same 18,240 people. That is normal for an app, so this report always shows people and times side by side. The number to take to the board is the small one: 2,412 people who said yes to a text from the brand.

Where the brand lived

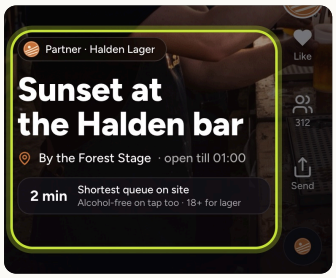

Eight places in the app. For each one: how many people saw it, and how many times it was seen.

	PLACE IN THE APP · HOW IT IS COUNTED	PEOPLE WHO SAW IT	TIMES SEEN
01	**Logo in the tab bar** One per screen opened: the logo sits in the tab bar on every screen. People = everyone who opened the app.	18,240	1,440,000
02	**Launch cover and Discover poster** Each time the launch cover or the Discover poster was on screen for at least a second.	16,900	96,000
03	**Push to the bar zone** Each push delivered to a phone in the bar zone (18+ only, at most three a day). People = phones that got at least one.	9,800	27,000
04	**Shop shelf** Each time the brand's shelf in the Shop was on screen.	5,200	8,150
05	**Sponsored stage and map pin** Each time the branded stage or pin was on screen on the map, or opened.	11,600	21,500
06	**Identity card frame** Each identity card made or opened in the brand's frame. Views by friends outside the app are not counted.	3,100	4,300
07	**FAQ answer** Each time an answer marked "Brought to you by" was opened.	7,400	11,200
08	**Monday survey** Each time the Monday question was opened. Answers are counted separately (see the survey line).	4,600	5,100
	Everyone with the app saw the logo	18,240	1,613,250

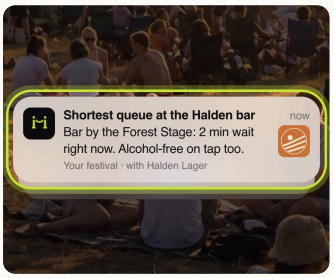

People can't be added up across rows: the same person sees several places. Times seen can: together they make 1,613,250.

08 Monday survey

Screens from the app with the example brand in place; the lime ring marks the place.

The bar zone

Who came to the sponsor's bar, when, and how long they stayed.

3,480

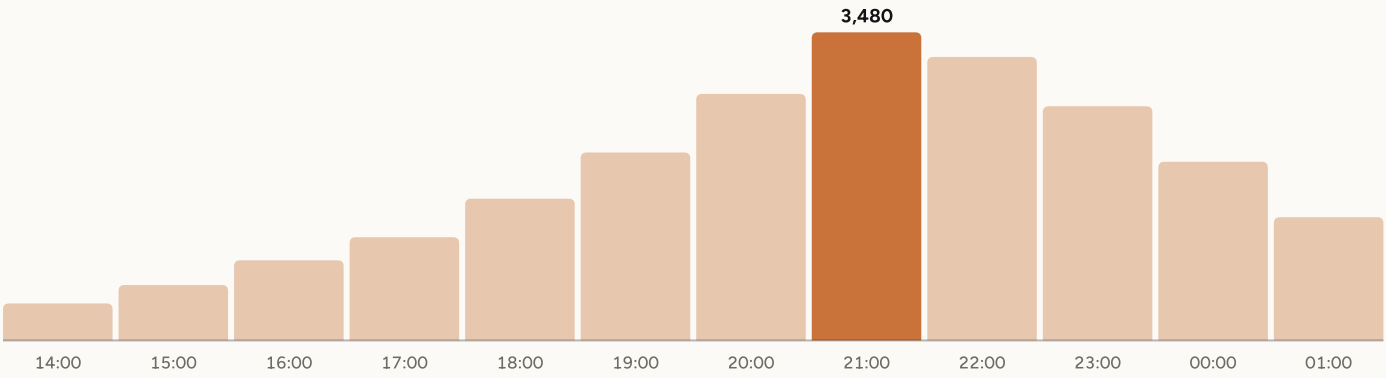

people in the zone in the busiest hour, Saturday 20:41 to 21:41

15,900 different people over the festival · 12 min average in the zone · 38 % aged 18–24

How these are measured
Zone counts are estimated from guests who switched location on, scaled to the crowd. Scans at the bar are exact. Age comes from the 18+ gate (year of birth, never stored with a name); origin from a voluntary postcode. We report groups of 50 people or more, never one person.

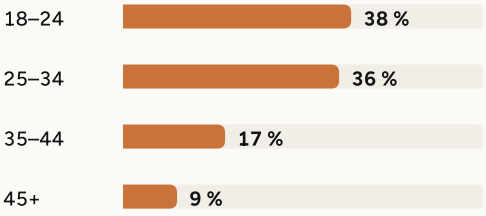

People in the zone per hour, Saturday

EXAMPLE DATA

Age bands in the zone

EXAMPLE DATA

Where they came from

EXAMPLE DATA

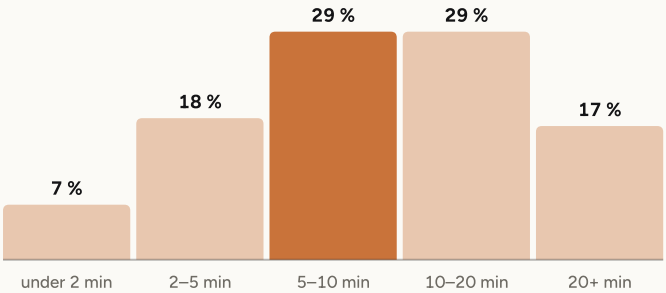

21 % From the region
35 % Rest of the country
44 % From abroad

A festival people travel to: a brand looking for reach beyond its home region.

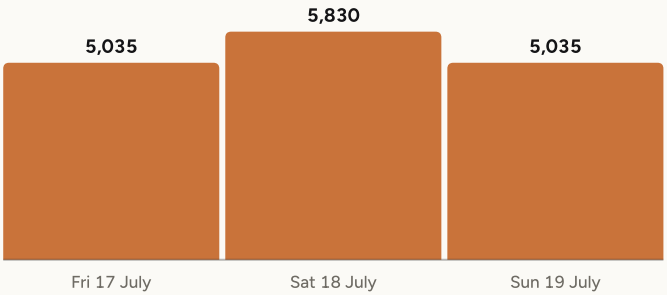

How long they stayed in the zone

EXAMPLE DATA

Zone visits per festival day

EXAMPLE DATA

A guest who came on two days counts on both days.

People who said yes

A guest scans the code at the bar with the app, reads one screen and switches it on. The brand gets a first name and a phone number, nothing else.

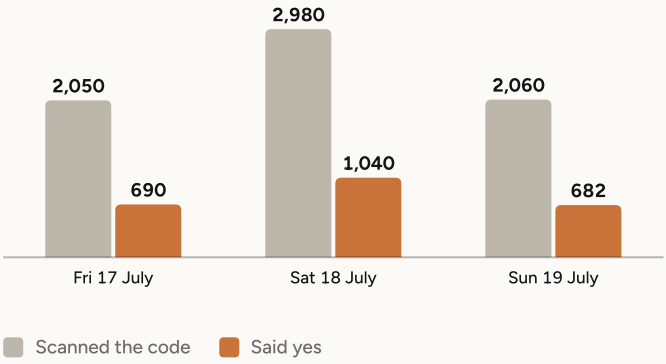

2,412

people said yes to a text from the brand. Every yes is recorded.

At a trade show, 2,412 scanned badges would cost about £361,800 (about £150 each). And a scanned badge is not a yes to texts.

Scanned the code vs said yes, per day

EXAMPLE DATA

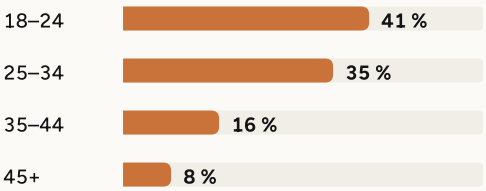

From the zone to a yes

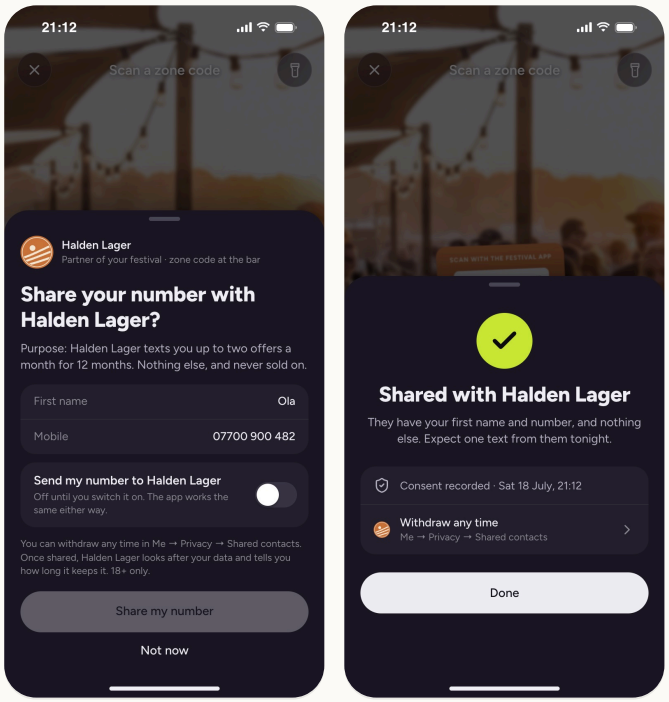

EXAMPLE DATA

Were in the zone	15,900
Scanned the code at the bar	7,090 · 45 %
Said yes to a text	2,412 · 34 % of scans

Who said yes, by age

EXAMPLE DATA

The yes screen and the confirmation, as the guest sees them.

How the yes works

FIVE RULES, BUILT IN

Separate and unticked. The switch starts off. The app works the same if the guest says no.

One channel. The yes covers texts only. Calls need their own yes.

Minimum data, 18+. First name and number only. Once shared, the brand looks after the data and says how long it keeps it.

Named, one purpose. The screen names the brand and says what the number is for. "Festival partners" is never enough.

Easy to withdraw. One tap in Me → Privacy. We tell the sponsor to stop, and keep a record of every yes and every no.

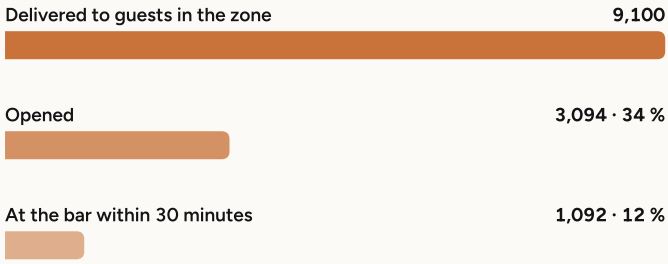

Not legal advice. Wording is checked by counsel per market before launch.

Did it move people?

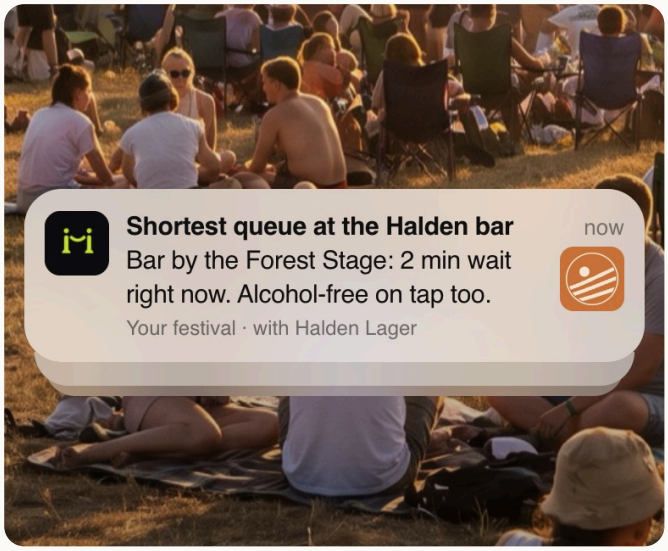

Seeing the logo is the floor. These numbers show a change in what people did.

One zone push, Sat 16:40: "Shortest queue at the bar"

EXAMPLE DATA

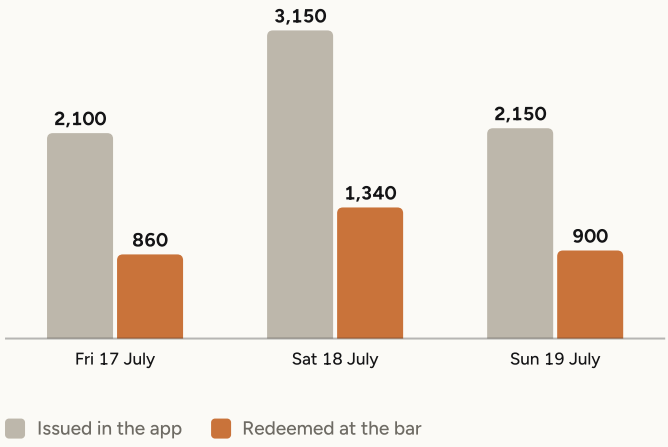

Zone visits in the 30 minutes after the push: **+22 %** against the same half hour the day before. Across the festival: 27,000 zone pushes delivered, 31 % opened, never more than three a day.

Bar coupons: issued vs redeemed

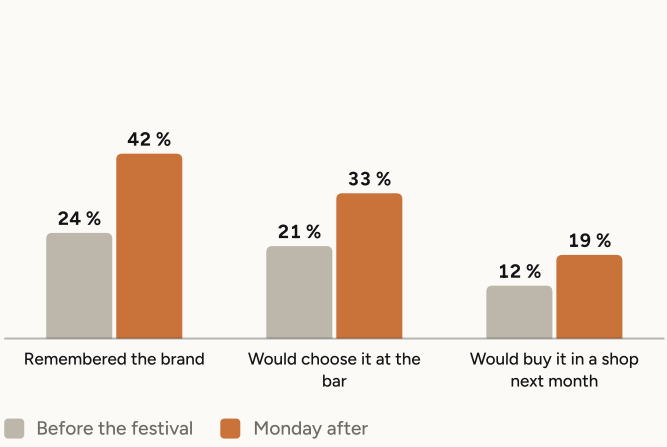

EXAMPLE DATA

3,100 of 7,400 redeemed (42 %). Redemptions are counted at the bar scanner; total bar sales need a till connection.

Monday survey: before vs after

EXAMPLE DATA · 1,850 ANSWERS

Monday survey: 42 % remembered the brand, up from 24 % before the festival. Two weeks before the festival and on the Monday after, app users got the same question: "Which lager brands come to mind first?" 1,850 answered on Monday. Answers are reported in groups of 50 or more.

MUTED SPONSOR PUSHES

SURVEY ANSWERS
1,850
Monday, in the app

One push. About 1,000 people in 3 minutes.

From a real festival, not invented: SBM. Shown without the brand's name or logo until SBM and the brand agree.

A sportswear brand's zone, a hip-hop artist on, almost nobody there.

Illustration, not the real zone.

01 **Empty zone**

A sportswear brand's zone had a hip-hop artist on. The crowd was elsewhere. The zone stood almost empty.

02 **One push**

The festival sent one message from its own app: who is on, where, and how far it is.

03 **Three minutes later**

About 1,000 people were in the zone. No banner can call a crowd over. The app did, in minutes.

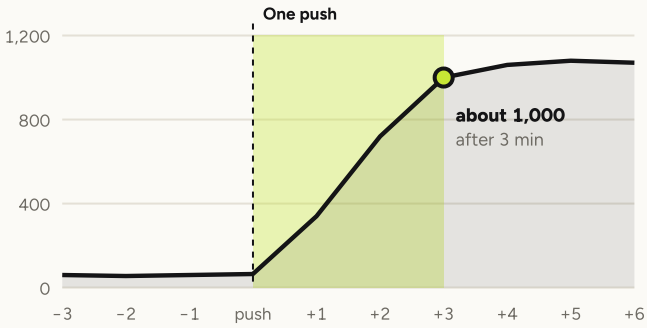

FESTIVAL APP now

On now in the sports zone

A hip-hop set just started. Two minutes' walk from where you are.

How such a push looks. Wording reconstructed, to confirm with SBM.

People in the zone, minute by minute SHAPE ILLUSTRATIVE

Only two numbers come from the festival: about 1,000 people, about 3 minutes. The rest of the line only shows the shape.

Why a sponsor cares. An empty zone is money spent on nobody. A banner can't call people over. The festival's app can, in minutes, and the report counts who came.

Before this is public

1 SBM agrees to be named.

2 The sportswear brand agrees (name and logo stay out until then).

3 The count is confirmed: how many people, how many minutes, how it was counted.

4 Date, time and artist, if they may be named.

Real case reported by SBM. Numbers and brand names need SBM's and the brand's consent before publication. The photo is a generated illustration.

The money

The app isn't free. The sponsor pays for it, and pays the festival the same again.

Halden Lager package, paid to the festival	£40,000
LineApp, the app for one edition	-£20,000

Example festival keeps **£20,000**

If no package sells, the festival pays the £20,000 for the app itself. That's the risk, written down.

£20,000 pays for the app

£20,000 stays with the festival

Half and half. The sponsor pays for your app, and pays you the same again.

What the £40,000 bought, place by place

EXAMPLE PRICES

PLACE IN THE APP	PRICE	PEOPLE WHO SAW IT	TIMES SEEN
Logo in the tab bar	£12,000	18,240	1,440,000
Launch cover and Discover poster	£8,000	16,900	96,000
Push to the bar zone	£6,000	9,800	27,000
Shop shelf	£4,400	5,200	8,150
Sponsored stage and map pin	£3,600	11,600	21,500
Identity card frame	£2,600	3,100	4,300
FAQ answer	£2,000	7,400	11,200
Monday survey	£1,400	4,600	5,100
The package	£40,000	18,240	1,613,250

The logo in the tab bar costs most because it is on every screen. Plus what no price list shows: 2,412 people who said yes to a text. At a trade show, 2,412 scanned badges would cost about £361,800 (about £150 each). And a scanned badge is not a yes to texts.

What we don't claim

✕ Bar sales caused by the app. We count zone visits and redeemed codes, not pints.

✕ The whole crowd. The app sees people with the app; whole-crowd counts need ticketing gates.

✕ Anyone's location without a yes. Zone counts come only from guests who switched it on.

Renewal, in one line. Same package next edition, with a second bar code at the campsite. This report is the proof that goes with the offer.
